This item is printed on demand - Print on Demand Neuware - Research paper from the year 2011 in the subject Medicine - Hospital Environment, Clinical Medicine, grade: 4 on 4 scale (A), , language: English, abstract: Poorly controlled or uncontrolled diabetic patients present several challenges and ethical dilemmas to health care professionals. Given the dramatic increase in the incidence and prevalence of diabetes mellitus worldwide, and with more women having babies later in life, as well as the growing financial constraints on medical care, it is recommended to design and conduct intervention studies that address the risk factors associated with developing gestational diabetes mellitus to, ultimately, promote healthy generations. Therefore, in this paper, findings of three clinical trials that may lead to new treatments for diabetes patients are covered and assessed. The assessment process involves hypothesis testing and inferential statistics, both of which offer a link between empirical evidence and theoretical interpretations. More specifically, the first chapter reviews the epidemiology and treatment recommendations for the assessment and management of pregnancies complicated by pregestational or gestational diabetes. It further discusses the differences between statistical versus clinical significance and covers...
