Createspace, United States, 2014. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Ever since the dawn of humanity, humans have attempted to fully comprehend and explain nature. However, orthodox science holds that not even the most sophisticated model is proficient enough to provide a perfect depiction of the universe. Indeed, no thought process thus far has ever managed to present social life, politics, economics, psychology, technology, the material world and terrestrial space as a seamless whole. Atomists described nature in the form of atoms and the surrounding void (empty space). Newtonian mechanics comprehended the natural world as being made up of particles and absolute space. Albert Einstein while explaining gravity suggested that the universe is best grasped as spatial (space) and temporal dimensions (time) - space-time. Today all the conventional fundamental interactions of nature, except gravity, are explained using the standard theory of particle physics. Albert Einstein's theory of gravitation and the Standard Model are known to be inconsistent with each other. Whereas the quantum theory describes the micro world (the subatomic composition of the universe such as electrons and quarks), the general theory of relativity excellently describes the macro world (cosmological scales such as stars, planets and galaxies). Einstein realized that the way out of the quagmire is to discover a Theory of Everything (ToE) that would unify or explain through a single model all the fundamental interactions of nature. Einstein died before achieving this feat. Following Einstein, a number of scientists have attempted to originate theories of everything (denoted as quantum gravity) such as string theory, superstring theory, M-theory and loop quantum gravity. However, critics observe that these theories do not constrain the characteristics of the predicted universe(s) and/or are inconsistent with observations. The Perfect Theory is...
