By Johns Hopkins Hospital

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 Excerpt: .adeno-carcinoma of the ovaries where, on using the special staining methods of Sanfelice, he was able to recognize large numbers of bodies similar to Sanfelice's blastomycetes, but no mention is made of any cultures or inoculation experiments. Finally Curtis has attempted to prove that blastomycetes were the cause of myxomatous tumors occurring in a man. Besides these five cases, including the present one, which have now been reported as producing pathogenic lesions in man, a large number of experiments have been carried out with various species of yeast fungi, particularly by Lydia Rabinowitch. This investigator experimented with fifty species of yeast fungi (blastomyces), and seven species were found to exercise a pathogenic effect in animals. It is especially interesting that they were all harmless for guinea-pigs, but pathogenic for mice and sometimes for rabbits. Her conclusions are that the parasites do not work through intoxication,...
